NBA Scoring Flow Analysis

Max Fan
Northeastern University

- This Sankey shows the average amount of points a player makes and how much of those are from 3 pointers, 2 pointers, and free throws
- There are 3 filters users can use to analyze the data more
    1. A slider to filter by the minimum average points per game
    2. A drop-down menu to filter by specific teams
    3. Checkboxes to filter by position
- These filters allow users to look for specific data quicker and get results faster
- For example, a user could look at which positions score the most or what teams have the highest scoring players
